

# ENROQUE®

## Enhanced productive efficiency

- Important antibacterial effect, mainly against Gram+ microorganisms.
- Excellent efficacy against *C. perfringens* (responsible for Necrotic Enteritis).
- Improved intestinal flora balance.
- No cross-resistance with other antibiotics used in animals or humans.

## PRODUCT DESCRIPTION

ENROQUE® provides proper microflora balance and enteritis control, protecting Digestive Integrity that results in better nutrient utilization and overall improvement of productive efficiency. It is highly effective against *C. perfringens*, responsible for Necrotic Enteritis. As Enramycin is not absorbed in the intestinal tract, ENROQUE® is the best alternative for residue-free treatments, with the added value of no cross-resistance with other antibiotics used in animals or humans.

## INDICATIONS

ENROQUE® is recommended for the prevention and treatment of diseases caused by Gram+ bacteria sensible to Enramycin in poultry and swine.

## COMPOSITION

Enramycin Hydrochloride 8%.

## ADMINISTRATION

Administer orally mixed with feed.

## RECOMMENDED DOSE

**Broilers:** 62.5 - 125 g of Enroque per MT of feed (5 to 10 ppm of Enramycin).

**Swine:** 62.5 - 125 g of Enroque per MT of feed (5 to 10 ppm of Enramycin).

## PACKING

25 kg.

## SPECIES

Poultry, Swine.
